

A day in the life of photos prompts

Digital Reef Rugosity (DRR) measurements being taken by Dr. Philip Dunstan.

DRR is measured with a digital level gauge, which measures temperature and pressure. Topside, these are converted to depth measurements.

Species abundance observations being taken along one of the 50m long transects.

The Mir - the research base

Orla Doherty recording reef damage.

Safety checks done, work begins! The researcher we are following (Dr. Philip Dustan is) on the left.

Work with the 'Friends of Menjangan' to protect the area.

Work with the local community and school children through 'Friends of Menjangan' on an island litter pick.
